Summary

I'm a result-oriented web developer, frontend developer with 1+ years of professional experience and a rare team work, communication and leadership ability. I build super responsive & nicely designed websites.

Over the past year, I have helped startups scale up their development as a developer. I love to create frontend solutions and add value to organizations.

I have extensive knowledge working with the MERN stack i.e in the following technologies: HTML, CSS, Bootstrap, Tailwind CSS, JavaScript, React.js, Python, Netlify, Firebase, Git & Github.

I also have basic knowledge of design principles and working with Figma in creating frontend layouts and converting them to code.

Being a software engineer has been my passion and it fuels me to going the extra mile in building relevant solutions and working in a goal-oriented team to accomplish uncommon tasks. I love solving problems with code.

I write clean, maintainable and scalable code taking performance, speed and user-experience into careful consideration.

I am a fast learner and open to learning or work opportunities that requires intensive learning.

I'm open to web developer or frontend engineer roles in a supportive environment where I can contribute my own quota for the growth of the organization and freelance projects relating to web design and web development, JavaScript or React JS projects, C language or Python projects. Thank you.

Experience

Frontend Developer at Allure Hub

Some of my achievements at Allure include:

Design, code, test, debug, document, build, and maintain.

I designed and implemented of new features and bug-fixes.

I resolve technical issues through debugging, research, and investigation.

I performed unit and end-to-end testing of application code as well as execution of implementation activities.

Founder/Frontend Developer at Mustard Tech

I am the founder and lead developer of Mustard Tech.

My experiences:

Working on modern web applications

A strong understanding of HTML, CSS with SCSS and JavaScript

Experience with Javascript components libraries

Experience with React,js

Awareness of SEO best practice

Consideration of accessibility in all aspects of my work

A strong understanding of web performance in complex user interfaces

Ability to interact with UX, designers and server-side developers

Curiosity about technology and a thirst to learn
